Calibration Information

**Calibration Procedure:**

Basic Description:

*AXIAL CALIBRATION:*

The three load cells (LC9, LC7, and LC1) were placed on top of the UB#300kip reference load cell in the Tinius Olsen machine. The load cells were loaded several cycles to allow the gains of the amplifiers to be adjusted to match the calibrated reference. LC9 and LC7 were calibrated to be used as normal force references 1 and 2 respectively.

*SHEAR CALIBRATION:*

The load cells were set up as shown in Figure 1, then loaded. The gain of the shear conditioner was adjusted such that the shear reading matched that of LC7.

*MOMENT CALIBRATION:*

The load cells were set up as shown in Figure 2, then loaded. The gain of the moment conditioner was adjusted such that the moment reading matched that of LC7 times the distance from the loading point to moment strain gages.

Distance from moment gages to: **top = 3.500 in** bottom = **2.750 in**
